**Part III DETAILED ACTION**

1. Claims 1-50 are pending.

2. Applicant's election without traverse of Group II, claims 14-18 in Paper No.15 is acknowledged.

Accordingly, claims 1-13 and 19-50 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to non-elected inventions.

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 15-16 and 18 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for assisting in the prediction of impaired glucose tolerance, type II diabetes or cardiovascular disease, does not reasonably provide enablement for the prediction of cardiovascular disease or all types of diabetes prediction or type I diabetes assisting in prediction. The specification does not enable any person skilled in the art to which it pertains, or with which it is most clearly connected, to use the invention commensurate in scope with these claims.

The specification has no working examples demonstrating a direct correlation between a defect in the glycerol kinase gene at position 288 with cardiovascular disease or diabetes mellitus. In fact Gaudet et al., (IDS) teaches that in analyzing 18 men with said defect that while all of them had severe hyperglycerolemia, they were apparently otherwise healthy.

Since the state of the art teaches that people with this defect are healthy, and Applicant has no working examples demonstrating otherwise, it would be unpredictable practice the full scope of the claimed invention. Lastly, Type I diabetes is well documented to be caused by an autoimmune disorder, not by a genetic metabolic disorder.

112:2nd

5. Claims 14-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 14, 15, 17 and 18 it is unclear what gene is being

analyzed. Since many genes have 10 exons. It is unclear what gene Applicant is claiming.
